

COMPLEX VARIABLES: HOMEWORK DUE MONDAY, 2/19/2018

1. PLUG AND CHUG PROBLEMS BASED ON SECTIONS 5.1, 5.2 AND 5.3

(1) Express $\exp(z)$ in the $u + iv$ -form for the following values of z :

(a) $z = \frac{1}{2} - i\frac{\pi}{4}$;

(b) $z = -1 + i\frac{3\pi}{2}$;

(c) $z = \frac{\pi}{3} - 2i$.

(2) Find all values of

(a) $\text{Log}(ie^2)$;

(b) $\text{Log}(\sqrt{3} - i)$;

(c) $\text{Log}(-\sqrt{2} + \sqrt{2}i)$;

(d) $\text{Log}((1 + i)^4)$;

(e) $\log(-3)$;

(f) $\log(8)$;

(g) $\log(4i)$;

(h) $\log(-\sqrt{3} - i)$.

(3) Find **the principal value** of

(a) 4^i ;

(b) $(1 + i)^{i\pi}$;

(c) $(-1)^{\frac{1}{\pi}}$;

(d) $(1 + i\sqrt{3})^{i/2}$.

(4) Find all the values of the following:

(a) i^i ;

(b) $(-1)^{\sqrt{2}}$;

(c) $i^{2/\pi}$;

(d) $(1 + i)^{2-i}$;

(e) $(-1)^{3/4}$;

(f) $i^{2/3}$.

(5) Find all values of z for which:

(a) $\exp(z) = -4$;

(b) $\exp(z) = 2 + 2i$;

(c) $\exp(z) = \sqrt{3} - i$;

(d) $\exp(z) = -1 + i\sqrt{3}$;

(e) $\text{Log}(z) = 1 - i\frac{\pi}{4}$;

(f) $\text{Log}(z - 1) = i\frac{\pi}{2}$;

(g) $\exp(z) = -ie$;

(h) $\exp(z + 1) = i$.

2. OTHER PROBLEMS

- (1) Provide justifications for the following:
 - (a) $\exp(z)^n = \exp(nz)$ for integer values of n ;
 - (b) $|\exp(z)| \leq \exp(|z|)$. (When does the equality hold?)
 - (c) $|\exp(z)| \leq 1$ if $\operatorname{Re}(z) < 0$.
- (2) Find the domain of the function $f(z) = \sum_{n=0}^{\infty} \exp(inz)$.
- (3) Discuss circumstances under which the following are true:
 - (a) $\operatorname{Log}(z_1 z_2) = \operatorname{Log}(z_1) + \operatorname{Log}(z_2)$;
 - (b) $\operatorname{Log}\left(\frac{z_1}{z_2}\right) = \operatorname{Log}(z_1) - \operatorname{Log}(z_2)$;
 - (c) $\operatorname{Log}(z^n) = n\operatorname{Log}(z)$. Assume integer values of n .
- (4) Cook up examples which show the following no longer hold.
 - (a) $\operatorname{P.V.}(z_1 z_2)^{1/3} = \operatorname{P.V.}(z_1)^{1/3} \cdot \operatorname{P.V.}(z_2)^{1/3}$;
 - (b) $\operatorname{P.V.} z^{2/3} = (\operatorname{P.V.} z^2)^{1/3}$.
- (5) Find branches of the following logarithmic functions satisfying the following conditions; give an explicit (piece-wise) formula relating the branches to $\operatorname{Log}(z)$, and interpret in terms of the Riemann surface. (Note: This is a modification of Problem 9 from your textbook.)
 - (a) Find a branch of $f(z) = \log(z)$ which is continuous at $z = -1$ and attains the value of πi there.
 - (b) Find a branch of $f(z) = \log(z)$ which is continuous at $z = 1$ and attains the value of $4\pi i$ there.
 - (c) Find a branch of $f(z) = \log(z)$ which is continuous at $z = -i$ and attains the value of $-5\frac{\pi}{2}i$ there.
- (6) Find the images of the following regions under the following maps. Provide an illustration and color code some of the corresponding edges. (Note: This is a modification of Problem 12 from your textbook.)
 - (a) Find the image of the left half-plane ($\operatorname{Re}(z) \leq 0$) under the exponential map $f(z) = \exp(z)$.
 - (b) Find the image of the rectangle given by $-1 \leq \operatorname{Re}(z) \leq 1$, $-\frac{\pi}{2} \leq \operatorname{Im}(z) \leq \frac{\pi}{2}$ under the exponential map $f(z) = \exp(z)$.
 - (c) Find the image of the rectangle given by $0 \leq \operatorname{Re}(z) \leq 1$, $-\frac{\pi}{4} \leq \operatorname{Im}(z) \leq \frac{\pi}{4}$ under the map $f(z) = (\exp(z))^2$.
 - (d) Find the image of the second quadrant under the logarithmic map $f(z) = \operatorname{Log}(z)$.
 - (e) Find the image of the third quadrant under the map $f(z) = -i \cdot \operatorname{Log}(z) + 1$.
 - (f) Find the image of the unit disk centered at the origin under the map $f(z) = \operatorname{Log}(2z)$.
- (7) Consider complex logarithm as a function defined on its Riemann surface. Find the pre-images, on the Riemann surface, of the following subsets of the complex plane. Please provide accompanying illustrations!
 - (a) The pre-image of the imaginary axis.
 - (b) The pre-image of the vertical strip $-1 \leq \operatorname{Re}(w) \leq 1$.
 - (c) The pre-image of the real axis.
 - (d) The pre-image of the vertical strip $0 \leq \operatorname{Im}(w) \leq 4\pi$.
